

THE BIG 10

REASONS BRAVO IS A BETTER TRAILER STANDARD ON ALL ALUMINUM MODELS

1

ATTITUDE

It all starts with the right attitude. Our team wakes up every day with the goal of making our trailers better. Bravo trailers work harder, look better and will outlast other brands.

2

PROTECTED WIRING

Bravo Trailers' in-frame wiring offers much more protection from road debris and weather. Bravo's protected wiring is the best in the industry. We will never leave you stranded.

3

NO SCOTCH LOCKS

We do not use scotch locks at Bravo. Utilizing the correct butt connector makes for a much more reliable trailer. This combined with our protected wiring make for a true commercial quality trailer.

4

ALUMINUM BACKERS

All exterior side wall lighting and door hold backs are mounted in an aluminum backer. They also act as a gusset connecting the front and rear to the side walls for a more commercial-grade frame.

5

SEALED FLOORS

Help keep your valuable cargo dry. Our 3/4" engineered wood floors are fully sealed around the perimeter edges. Aluminum provides the backing and hi-tech sealant is used to help keep the water and dust out.

6

PERIMETER FRAME

All Bravo aluminum tag trailers feature a strong and light perimeter style frame. Star and ICON Gooseneck trailers feature our super strong hybrid double main frame. Bravo aluminum trailers last longer and tow better.

7

REINFORCED A-FRAME

Reinforced A frames combined with the vertical tubes in all of our front ends make Bravo trailers the strongest in the business. Reinforced A frames equal stronger, safer and longer lasting trailers.

8

WHEEL BOX

All 8.5' wide Bravo aluminum trailers feature wheel box framing which adds tremendous strength to our trailers. It's the combination of all of the BIG 10 +5 construction features that make our trailers last longer and tow better.

9

REAR RAMP DOOR

All Bravo trailers with rear ramp doors have a tube connecting the rear cross member where the hinge is welded on to the nearest cross member. This reinforcement adds strength at a critical tension point.

10

SCREWLESS SIDEWALLS

All Bravo aluminum trailers come standard with 3M VHB screwless exterior aluminum sidewalls. The smooth exterior sidewalls not only look great but are better sealed against the elements.

FIVE MORE STANDARD BRAVO FEATURES FOR A COMMERCIAL QUALITY PRODUCT!

PLUS 5

1

WORKMANSHIP

We are proud of the trailers we build! Please take a look at the fit and finish of our trailer versus the competitions. Look at the trim, miters, straightness of our tube frames, paint, interior finish and judge for yourself. We take the time to do it right, both inside and out.

2

SEALED FRONT CORNERS

Enclosed cargo trailers are notorious for leaking. Bravo seals the front interior corners with aluminum and sealant so water and dust can't get inside. We also seal the plywood floor along the front of the trailer. Do you want your valuable cargo to get dusty or wet?

3

SEALED WHEEL BOXES

Our goal at Bravo is for "no leak no dust" trailers and our sealed wheel boxes are a big part of achieving that. We seal both the external and internal joints before assembling to keep water and dust out.

4

BAR LOCK PROTECTION

Another exclusive Bravo feature is our nylon bar lock shims. These eliminate the metal-on-metal rubbing and resulting damage to the aluminum door trims. This is another example of why Bravo Trailers are built better and last longer!

5

CUSTOMER SERVICE

No other trailer manufacturer will address your needs as quickly or fairly as Bravo. We have the parts and expertise to keep you on the road. We believe that thrilled customers are our greatest asset!
